

British Heart Foundation

Scotland Factsheet

February 2023

Our vision is a world free from the fear of heart and circulatory diseases.

This month in Scotland

1,500

people will die from a heart or circulatory disease around

450 of them will be

younger 75

700k

people are living with a heart or circulatory disease

840

hospiṭal admissions will be due to a heart attack 590

people will die from coronary heart disease 30

babies will be diagnosed with a heart defect

	Quick Lir	
Heart and Observed		Core

Heart and Circulatory Diseases	Cost	Coronary Heart Disease	Heart Attack
Atrial Fibrillation	Heart Failure	Stroke	Out-of-Hospital Cardiac Arrest
Congenital Heart Disease	Inherited (Genetic) Conditions	Vascular Dementia	Risk Factors

Heart and Circulatory Diseases (Cardiovascular Disease; CVD)

Heart and circulatory diseases is an umbrella term for all diseases of the heart and circulation. It includes everything from conditions that are inherited or that a person is born with, to those that are develop later, such as coronary heart disease, atrial fibrillation, heart failure, stroke and vascular dementia.

• There are an estimated 700,000 people living with heart and circulatory diseases in Scotland. An ageing and growing population and improved survival rates from heart and circulatory events could see these numbers rise still further.

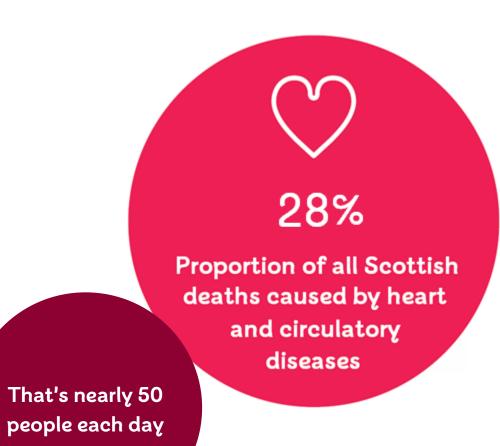

Prevalence rates for heart and circulatory diseases in the most deprived areas of Scotland are <u>significantly higher</u> than those in the least.

- It's forecast that the health burden of heart and circulatory diseases (CVD) will increase by 34% between 2019 and 2043 the highest increase of all disease groups.
- Heart and circulatory diseases cause nearly three in ten (28 per cent) deaths in Scotland, or nearly 18,000 deaths each year - that's nearly 50 people per day or 1,500 per month.
- Around 5,300 people under the age of 75 in Scotland die from heart and circulatory diseases each year.
- Since the BHF was established the annual number of heart and circulatory deaths in Scotland has fallen by half. In 1961, 34,547 deaths over half of all deaths that year in Scotland were attributed to heart and circulatory diseases.

Linked conditions

Around 80 per cent of people with heart and circulatory diseases have at least one other health condition

Deaths from and numbers living with heart and circulatory diseases (CVD)

Nation	No. of People Dying from CVD (2021)	No. of People Under 75 Years Old Dying from CVD (2021)	Estimated Number of People Living with CVD (latest estimate)
SCOTLAND	17,639	5,345	700,000
England	136,616	38,481	6.4 million
Wales	9,503	2,864	340,000
Northern Ireland	4,033	1,111	225,000
UK total	168,030	47,956	7.6 million +

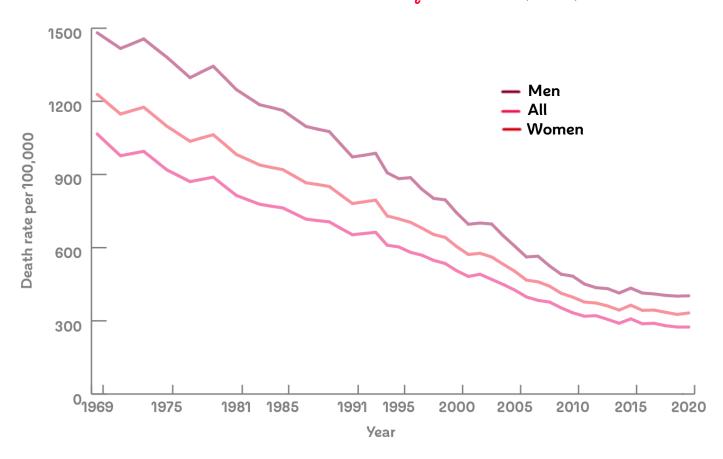

Deaths - BHF analysis of latest official statistics (ONS/NISRA/NRS); UK total includes non-residents (ONS data); ICD-10 codes 100-99, F01,Q20-8, C38.0, P29, G45 Living with CVD estimates based on latest health surveys with CVD fieldwork and GP patient data

Death Rates

Death rates take the age structure (demography) of local areas into account to reveal the real differences in statistics. This is very important when there are big variations in the age profile of communities across the Scotland.

- Since 1961 the Scottish death rate from heart and circulatory diseases has declined by more than three quarters.
 Death rates have fallen more quickly than the actual number of deaths because people in this country are now living longer.
- The latest premature (under 75) death rate for heart and circulatory diseases for Glasgow (134 per 100,000 people) is more than twice as high as for Shetland Islands (57 per 100,000).
- Early death rates from heart and circulatory diseases (before the age of 75) are generally higher in Scotland than the rest of the UK.

Death rates from heart & circulatory diseases (CVD) Scotland

Scotland premature (under 75) heart and circulatory diseases (CVD) death rates 2018-20

Local Authority — Top Five	Under 75 Death Rate per 100,000 Population	Under 75 Annual Number of CVD Deaths
Glasgow	133.6	606
West Dunbartonshire	113.9	98
Dundee	110.8	136
Inverclyde	110.4	87
North Lanarkshire	109.2	336

The Cost of Heart and Circulatory Diseases

• Each year heart and circulatory diseases cost NHS Scotland around £800m.

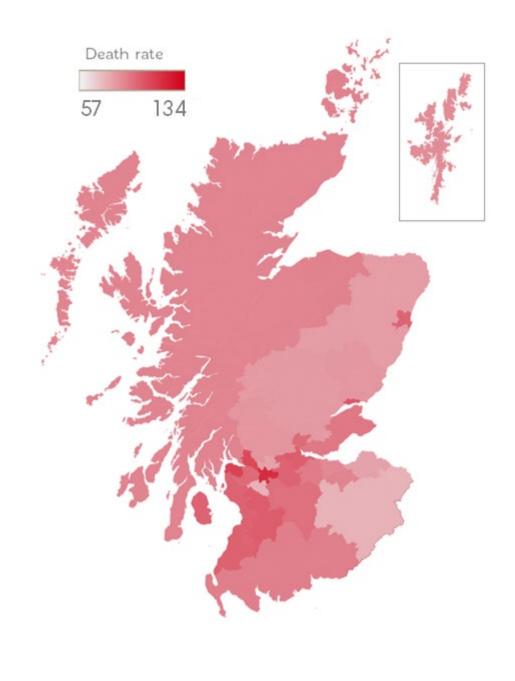

Linked conditions

- There are an estimated 900,000 people living with either a heart/circulatory disease <u>or</u> diabetes in Scotland.
- There are an estimated 200,000 people living with a heart/circulatory disease <u>and</u> diabetes in Scotland.

For more info please visit:

Regional and local statistics

Premature heart & circulatory disease (CVD) death rate by LA 2018-20

Coronary Heart Disease (CHD; Ischaemic Heart Disease)

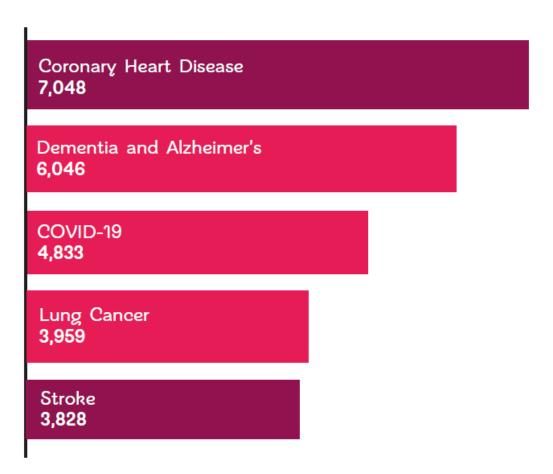

Coronary heart disease (CHD) is the most common type of heart and circulatory disease. It occurs when coronary arteries become narrowed by a build-up of atheroma, a fatty material within their walls. The pain or discomfort felt from such narrowing is called angina and if a blockage occurs it can cause a myocardial infarction (heart attack).

Key Facts

- Coronary heart disease (CHD) is Scotland's single biggest killer.
 It was also the leading cause of death worldwide in 2019.
- CHD is responsible for around 7,000 deaths in Scotland each year that's around 19 deaths per day.
- In Scotland, one **in seven** men and **one in 12** women die from coronary heart disease (one in nine overall).
- CHD kills nearly **three times as many women** as breast cancer in Scotland: it even kills more women prematurely (before the age of 75).

Top Five Causes of Death, Scotland 2021

Key Facts

- Since the BHF was established the annual number of CHD deaths in Scotland has fallen by more than half.
- CHD death rates are on average higher in Scotland than the rest of the UK
- Around 2,900 people under the age of 75 in Scotland die from CHD each year
- There are up to 250,000 people in Scotland living with coronary heart disease 150,000 men and 100,000 women
- Coronary heart disease is the leading cause of heart attacks

Prevalence rates for coronary heart disease in the most deprived areas of Scotland are over twice as high as those in the least deprived.

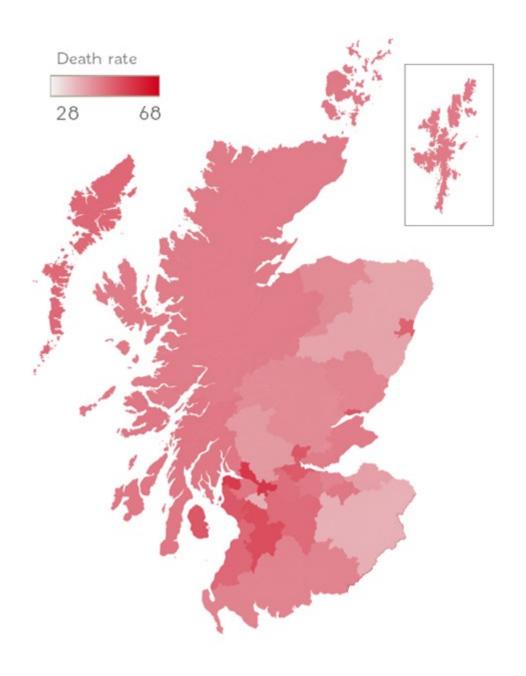

Linked conditions

 Individuals with coronary heart disease, or who have had a heart attack, are twice as likely to have a stroke.

For more information please visit:

- Regional and local statistics
- Coronary Heart Disease

Premature CHD death rate by local authority 2018-20

Heart Attack (Myocardial Infarction, MI)

- There are at least 10,000 hospital admissions for heart attacks in Scotland each year: that's 28 admissions each day or 1 every 50 minutes.
- Around 150,000 people alive in Scotland today have survived a heart attack.
- In the 1960s more than 7 out of 10 heart attacks in the UK were fatal. Today more than **7 out of 10 people survive**.

Atrial Fibrillation (AF)

Atrial fibrillation is one of the most common forms of abnormal heart rhythm (arrhythmia) and a major cause of stroke.

- More than 100,000 people in Scotland have been diagnosed with atrial fibrillation.
- It is estimated that there are at least 23,000 people aged over 65 with undiagnosed (or silent) atrial fibrillation in Scotland.

Linked conditions

- People with AF are five times more likely to have a stroke
- AF is a contributing factor to one in five strokes

For more info please visit:

- ➤ Heart Attacks
- > Atrial Fibrillation

Heart Failure

Heart failure occurs when the heart is not pumping blood around the body as well as it should, most commonly when the heart muscle has been damaged – for example, after a heart attack.

- Around 48,000 people in Scotland have been diagnosed with heart failure by their GP
- Estimates which include diagnoses at hospital show there are thousands more people living with the condition across the country

Around 48,000 people in Scotland have been diagnosed with heart failure by their GP

Stroke (Cerebrovascular Disease; CBVD)

A stroke occurs when the blood supply to part of the brain is cut off, causing brain cells to become damaged. A transient ischaemic attack (TIA) is also known as a "mini-stroke" and is caused by a temporary disruption in the blood supply to part of the brain.

- Strokes cause around 3,800 deaths in Scotland each year.
- In Scotland there are over 11,000 hospital admissions for stroke each year that's an average of 32 per day or 1 every 46 minutes.
- Around 130,000 people living in Scotland have survived a stroke or transient ischaemic attack (TIA).
- More than half of stroke survivors in Scotland are under 75.

Prevalence rates for stroke in the most deprived areas of Scotland are more than twice those in the least deprived.

Linked conditions

- People with heart failure are **2-3 times** more likely to have a stroke.
- People with diabetes are twice as likely to have a stroke

For more info, visit our website:

- Stroke
- > OHCA

Vascular Dementia

Vascular dementia happens when there's a problem with the blood supply to an area of your brain. The cells in the affected area of your brain don't get enough oxygen or nutrients and start to die. This leads to symptoms such as concentration problems and personality changes.

- Vascular dementia causes around 1,800 deaths each year in Scotland numbers could be higher as it can be difficult to diagnose the different types of dementia.
- Vascular dementia is the second most common type of dementia, seen in up to 1 in 5 cases.
- Vascular dementia is estimated to affect at least 150,000 people in the UK.
- By 2050 it's predicted that the numbers living with vascular dementia could double.

Linked conditions

- People with a family history of coronary heart disease are significantly more likely to develop vascular dementia
- Vascular dementia accounts for three quarters of dementia cases in stroke survivors
- People with diabetes are 2-3 times more likely to develop vascular dementia

For more info please visit:

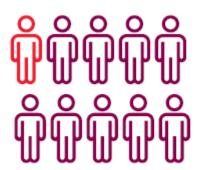

Vascular dementia

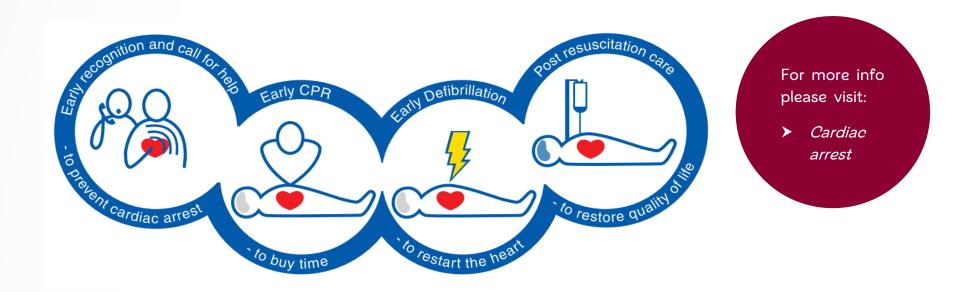

Out-of-Hospital Cardiac Arrest (OHCA)

Cardiac arrest is a critical medical emergency, where the heart stops pumping blood around the body. Unless treated immediately, it leads to death within minutes.

- There are around 3,100 out-of-hospital cardiac arrests (OHCAs) in Scotland each year.
- The survival rate in Scotland is just 1 in 10.
- Every minute without cardiopulmonary resuscitation (CPR) and defibrillation reduces the chance of survival by up to 10 per cent.
- Early CPR and defibrillation can more than double the chances of survival in some cases.
- Rates of survival and bystander CPR are much lower in areas of greatest deprivation, but people in the most deprived areas are twice as likely to have one.
- The Chain of Survival (below) is a sequence of steps that together maximise the chance of survival following cardiac arrest.

Only 1 in 10 people survive an out-of-hospital cardiac arrest in Scotland

Congenital Heart Disease

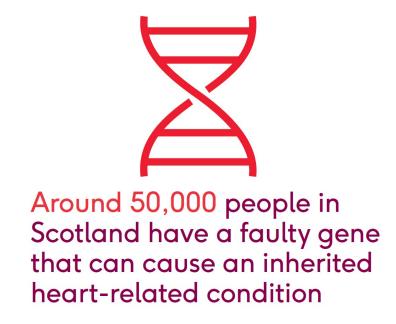

Congenital heart disease is a heart condition or defect that develops in the womb before a baby is born.

- Heart defects are diagnosed in at least 1 in 150 births that's around 30 babies each month in Scotland with more diagnoses later in life.
- Estimates suggest that in total as many as 1-2 per cent of the population may be affected.
- Before the BHF existed, the majority of babies diagnosed with a severe heart defect in the UK
 did not survive to their first birthday. Today, thanks to research, more than 8 out of 10 survive
 to adulthood.

Inherited (Genetic) Conditions

These are conditions which can be passed on through families, affect people of any age and may be life-threatening.

- An estimated 27,000 people in Scotland have an inherited heart condition these
 include hypertrophic cardiomyopathy (HCM; 1 in 500 people), dilated cardiomyopathy (DCM)
 and arrhythmogenic right ventricular dysplasia/cardiomyopathy (ARVD/ARVC).
- There are other conditions which can affect the heart and circulatory system, with an unusually high risk of developing heart disease or dying suddenly at a young age, including familial hypercholesterolaemia (FH; 1 in 250, or 22,000 people).
- Every week in the UK at least 12 young people (aged under 35) die from an undiagnosed heart condition.
- Using high-intensity statins can reduce cholesterol levels by half. For many people with FH this will be reduced to a safe level, lowering their risk of death from heart disease.

Risk Factors

Many different risk factors increase your likelihood of developing heart and circulatory diseases.

High Blood Pressure (Hypertension)

- High blood pressure is the leading modifiable risk factor for heart and circulatory disease in Scotland.
- An estimated 29 per cent of adults in Scotland have high blood pressure (that's around 1.3 million adults)
- Around 790,000 people are on their GP's hypertension register, but many of them are not receiving effective treatment.
- As many as 500,000 adults with high blood pressure are undiagnosed.

Linked conditions

 Around half of heart attacks and strokes in Scotland are associated with high blood pressure

Diabetes

Diabetes is a condition in which blood sugar levels are elevated over a prolonged period of time. This results in damage to the inner lining of blood vessels. Consequently, diabetes is an important risk factor for heart and circulatory diseases (CVD).

- Around 300,000 adults in Scotland have been diagnosed with diabetes.
- It's estimated that there may be **thousands more** in Scotland with undiagnosed Type 2 diabetes.
- Around 90 per cent of those diagnosed are living with Type 2 diabetes and 10 per cent have either Type 1 or rarer types.

Prevalence rates for diabetes in the most deprived areas of Scotland are nearly <u>twice</u> as high as those in the least deprived.

Linked conditions

- Adults with diabetes are 2-3 times more likely to develop CVD, and are nearly twice as likely to die from heart disease or stroke
- In the UK, **one third** of adults with diabetes die from a heart or circulatory disease

Around 300,000 adults have been diagnosed with diabetes in Scotland

High Blood Cholesterol

- High blood cholesterol is a significant risk factor for developing heart and circulatory disease.
- More than 1 in 4 deaths from heart and circulatory diseases in Scotland are associated with high LDL (low-density lipoprotein) cholesterol.

For more information, visit our website:

- High Blood Pressure (Hypertension)
- High Cholesterol
- Diabetes

Smoking

- Between 11 and 15 per cent of adults smoke cigarettes in Scotland – that's up to 660,000 adults.
- There are around 52,000 smoking-related hospital admissions each year in Scotland
- There are up to 10,000 smoking-related deaths each year in Scotland
- Each year up to 2,000 deaths from heart and circulatory diseases in Scotland are attributable to smoking

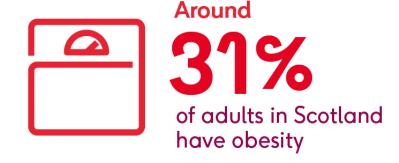

Overweight/Obesity

- An estimated **31 per cent** of adults in Scotland have obesity and in addition more than a third (36 per cent) have a body-mass index (BMI) defined as overweight
- Nearly 3 out of 10 (28 per cent) children in Scotland have a BMI defined as overweight or obese.
- In Scotland nearly 1 in 5 heart and circulatory disease deaths are associated with a high body-mass index.

Diet and Exercise

- Nearly **a third** of adults in Scotland (31 per cent) do not achieve recommended levels of physical activity.
- Less than 1 in 4 adults in Scotland (22 per cent) eat the recommended five portions of fruit and veg per day.
- Nearly 1 in 4 adults in Scotland (23 per cent) regularly exceed guidelines for daily alcohol intake; no level of use is without risk.

Other Risk Factors

- Poor air quality has a significant impact on cardiovascular health. Each year up to 700 deaths from heart and circulatory disease in Scotland are attributable to particulate matter pollution.
- Other risk factors can significantly increase your risk of developing heart and circulatory diseases, including impaired kidney function, age, gender, family history and ethnicity.

About the British Heart Foundation (BHF)

Three in ten of us in Scotland and one in three globally die from heart and circulatory diseases. That's why the British Heart Foundation funds world-leading research into their causes, prevention and treatment. Advances from our research have saved and improved millions of lives, but heart diseases, stroke, vascular dementia and their risk factors such as diabetes still cause heartbreak on every street. With the public's support, our funding will drive the new discoveries to end that heartbreak.

We are **the biggest independent funder** of heart and circulatory disease research in Scotland. Find out more at bhf.org.uk

bhf.org.uk/donate
